Education:

Cornell University, College of Engineering

Bachelor of Science, Electrical and Computer Engineering
GPA: 3.973/4.300

Ithaca, NY

Expected May 2028

Relevant Courses: Digital Logic & Computer Organization; Embedded Systems; Signals & Systems; Computer Systems Programming; Circuits for Electrical & Computer Engineers; Probability & Inference for Random Signals & Systems

Work Experience:

General Atomics Aeronautical Systems, Inc.

June 2026 - August 2026

Systems Engineering Intern

San Diego, CA

- Pioneered aircraft systems integration for the U.S. Army's Next-Generation Command and Control initiative, coordinating technical requirements across company-wide engineering teams.
- Reimaged a Ground Control Station, installing flight monitoring and test software used by 15+ engineers.
- Designed 50+ requirements and 20+ verification test cases for US Army Next-Gen C2 technology.
- Built AI agents to automate 3 recurring engineering workflows, cutting manual processing time by ~30%.

Cornell University Physical Intelligence

January 2026 - Present

Electrical Subteam Member

Ithaca, NY

- Led design of high voltage Power Distribution Board for hexapod robot for 18+ motors supporting a 48V bus with individually fused channels for overcurrent protection.
- Designed custom buck converter and LDO boards in Altium to support testing and integration into hexapod robot.
- Assisted development of a diverse portfolio of custom PCBs for Modovolo Drone's UAV platform.
- Built the team as a founding member through early project development and member recruitment.

Cornell Hyperloop

November 2025 - Present

Power Systems Subteam Member

Ithaca, NY

- Led development of custom BMS and battery for a 12V 300Ah pack, designing monitoring circuitry for cell voltage, temperature, and state of charge to ensure safe operation.
- Designed custom EPO (Emergency Power Off) circuit schematic and PCB layout validating 8+ power regulation, protection, and control circuits in SPICE to catch design flaws before fabrication.
- Placed 5th in European Hyperloop Week for cutting edge research and design.

Projects:

Emergency Power Off Board

- Designed a safety-critical 2-layer PCB in KiCAD with a latching, dual-relay emergency cutoff stage driven by 3 logic-level MOSFETs, protected by flyback diodes and fuse-based overcurrent safeguards.
- Verified power cutoff within 50ms of trigger activation through SPICE simulation, ensuring reliable shutdown for the Hyperloop pod.

Bluetooth Speaker PCB

- Designed a custom 2-layer Bluetooth speaker using stereo Class-D amplification rated for up to 3 W per channel.
- Engineered 5 V power distribution and decoupling networks to support two independent audio channels.
- Developed custom Bluetooth module footprints and optimized antenna clearance, audio signal routing, and speaker connections to minimize electrical interference.

Buck Converter and LDO Board

- Designed 2 power regulation circuits integrating an asynchronous buck converter and low-dropout regulator.
- Developed layouts incorporating input/output filtering and power-stage components to manage switching noise.
- Bench-tested voltage regulation stability across varying load conditions to validate design performance.

Technical Skills:

Design Tools: Altium, KiCAD, Solidworks, TinkerCAD, Autodesk Inventor, LTspice

Hardware: Analog Circuit Design, FPGA, Arduino, Raspberry Pi, ESP32, UART, RF Measurement

Software: Verilog, Claude, Cursor, Docker, Python, Java, C++, C, Linux (Red Hat, Ubuntu), Bash, MATLAB, R, Git

Interests: Badminton, Video Game Development, Soccer, Chess, Track and Field, Poker, Board Games
